

pool-deck

Currently there is no prefabricated drainage channel system for tiled pools. The building company designs it and executes it, improvising its design at all times, with the high cost and time which this process entails.

Butech develops solutions to meet the needs that the tile market demands, offering a complete solution to ease the designer obtaining a comprehensive aesthetic with absolute safety and guarantee of finish, easy maintenance, longevity and resistance to low temperatures (ice) and chemical resistance demanded by swimming pool applications.

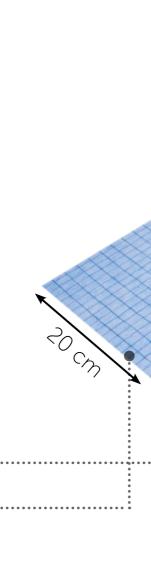

Installation as simple as shower deck.

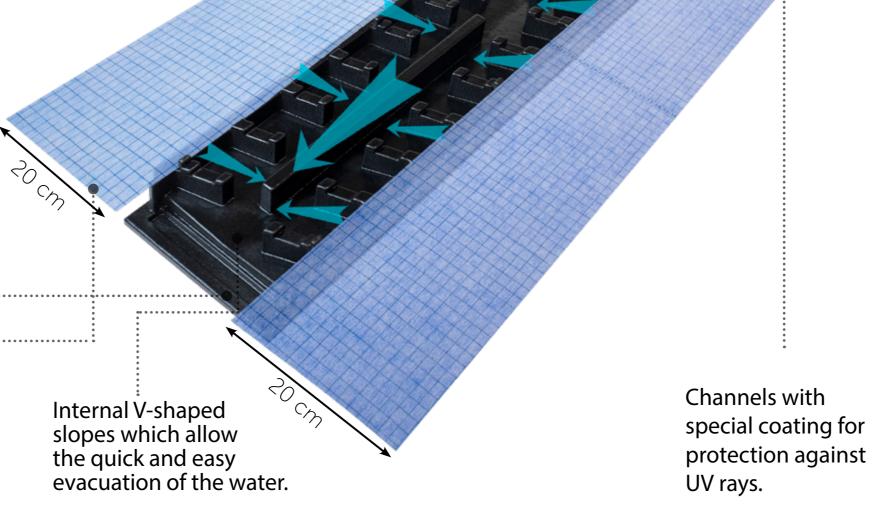

Advantages

Easy connection. Perfect union between joints.

Excellent connection with the flooring waterproofing system through imperband eaves.

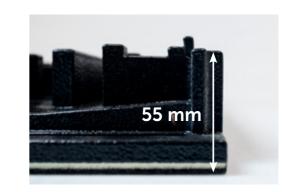

High performance polyurethane finish.

Total sealing with p-404

MINIMUM THICKNESS

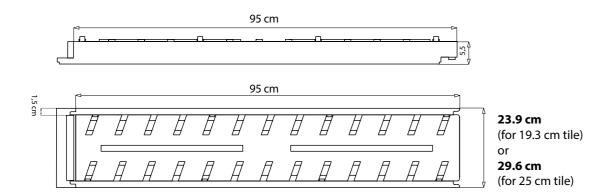

CE MARKING ϵ

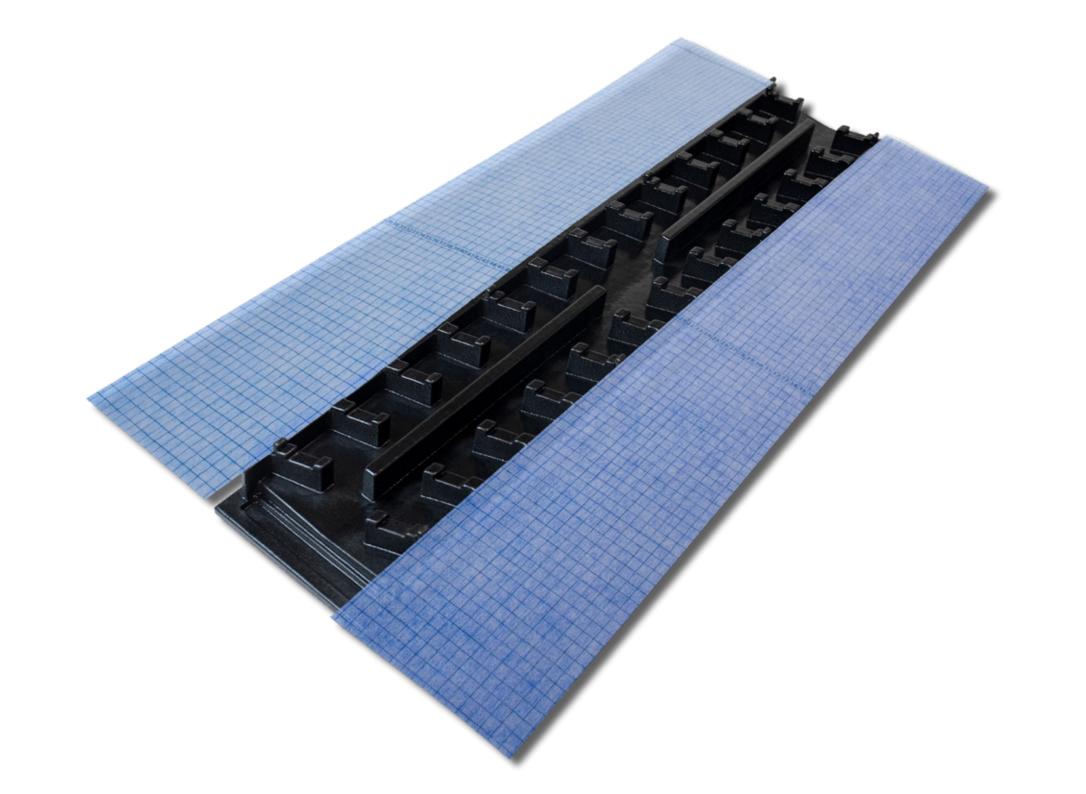

The system consists of a series of elements that, once connected, form a drainage channel for swimming pools and terraces, ready to be covered with tiles. All the parts of the **pool-deck** system are available for these tile widths:

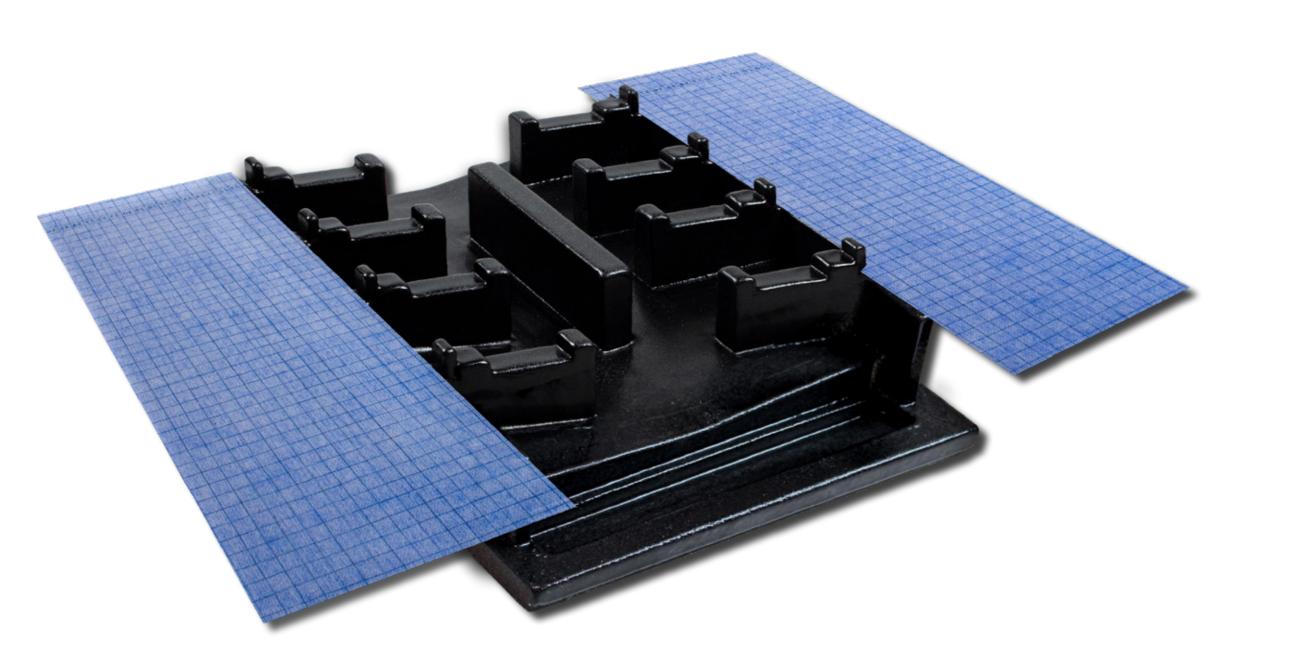

193 mm and 250 mm.

pool-deck channel

95 cm long channel with internal V slope.

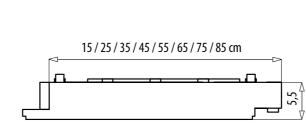

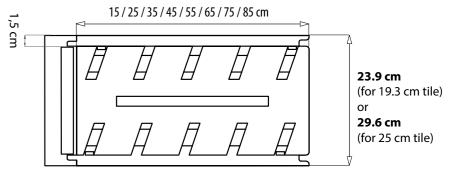

pool-deck adjustment channel

Adjusting piece of different lengths with internal V slope.

Includes: heat-sealed **imperband** waterproofing sheet on the eaves of the channel. To complete the length required by the installation, these pieces will be available in the following sizes: 15, 25, 35, 45, 55, 65, 75 and 85cm.

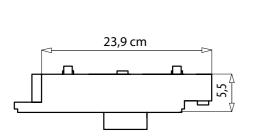

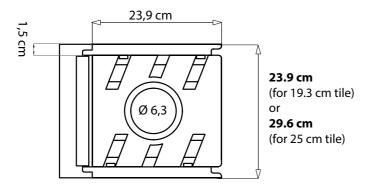

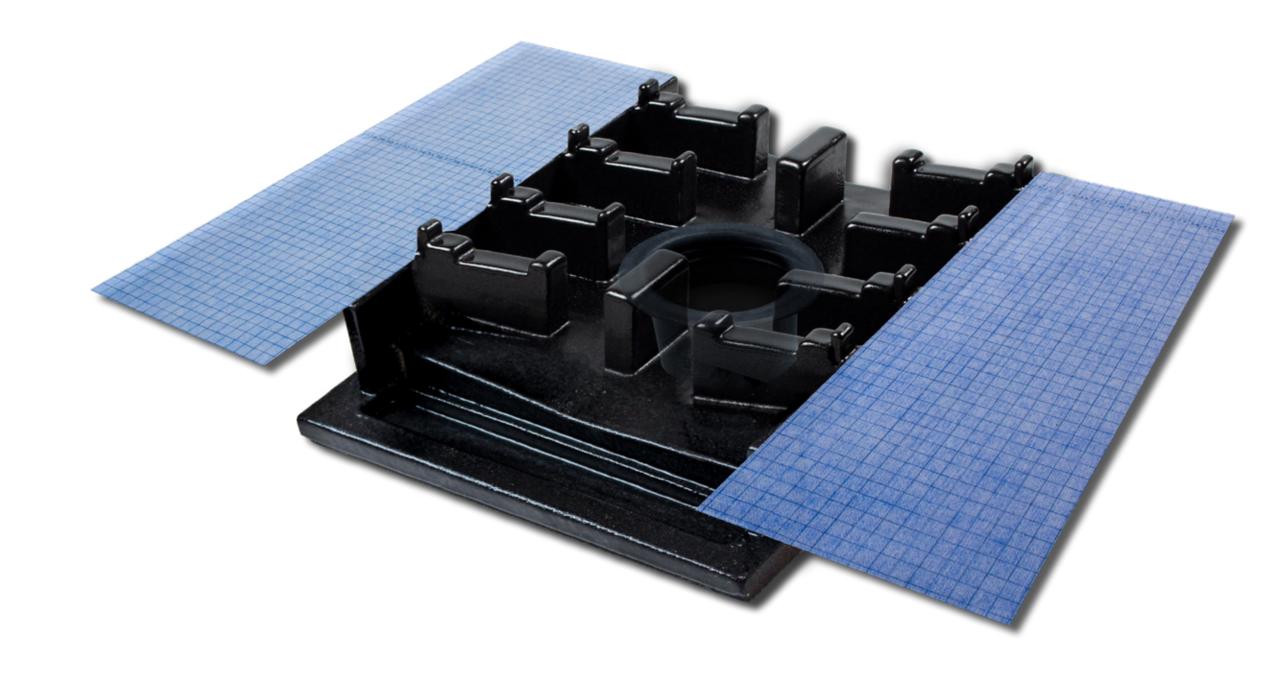

pool-deck drain

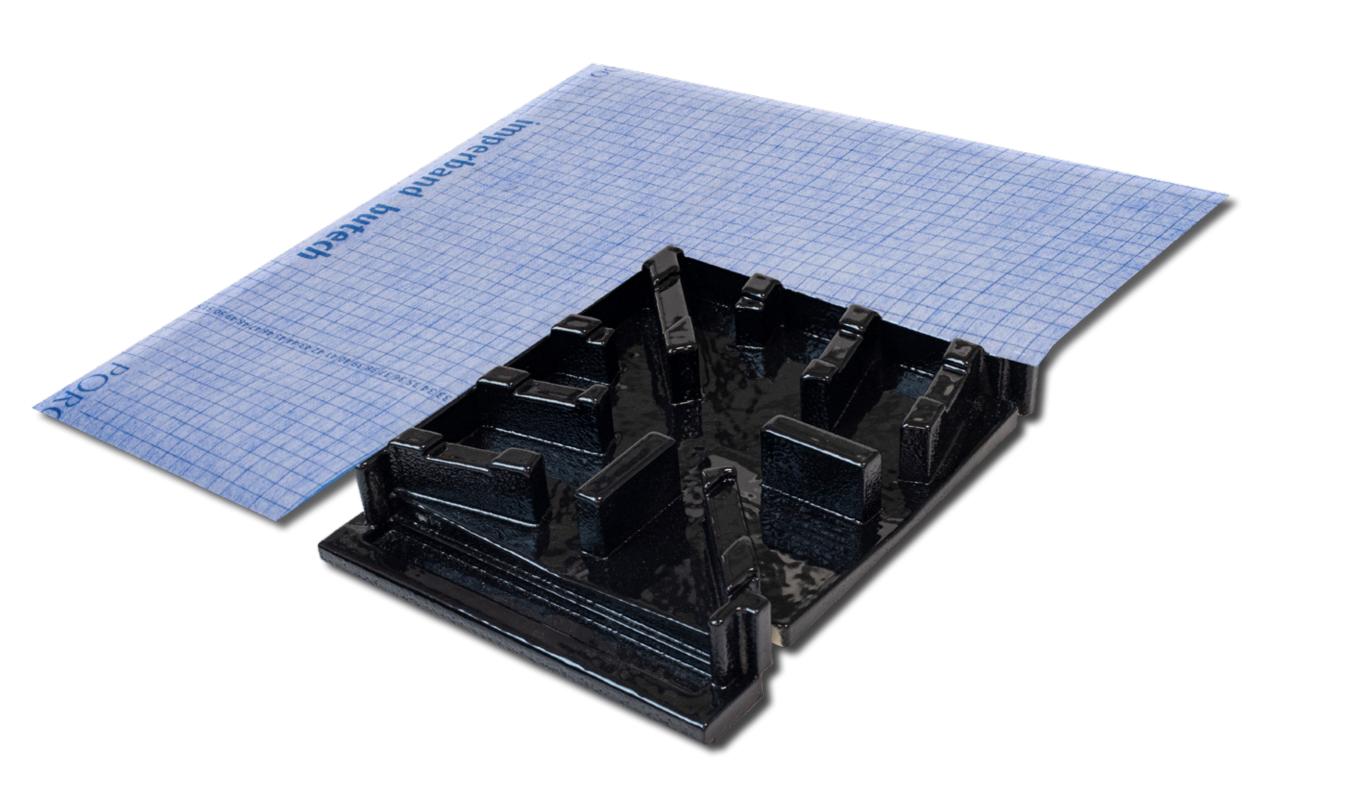

Drain piece with internal V slope.

Includes: heat-sealed **imperband** waterproofing sheet on the eaves of the channel and special drain that supports high pressures and withstand products commonly used in swimming pools.

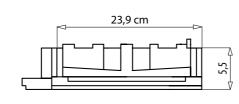

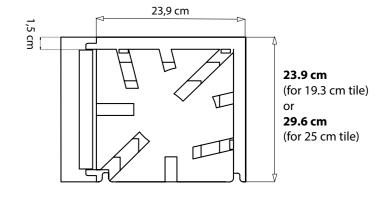

pool-deck corner

Corner piece with internal V slope.

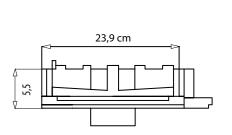

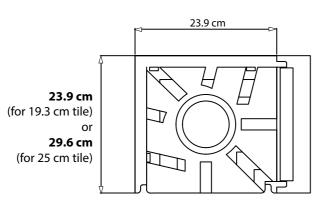

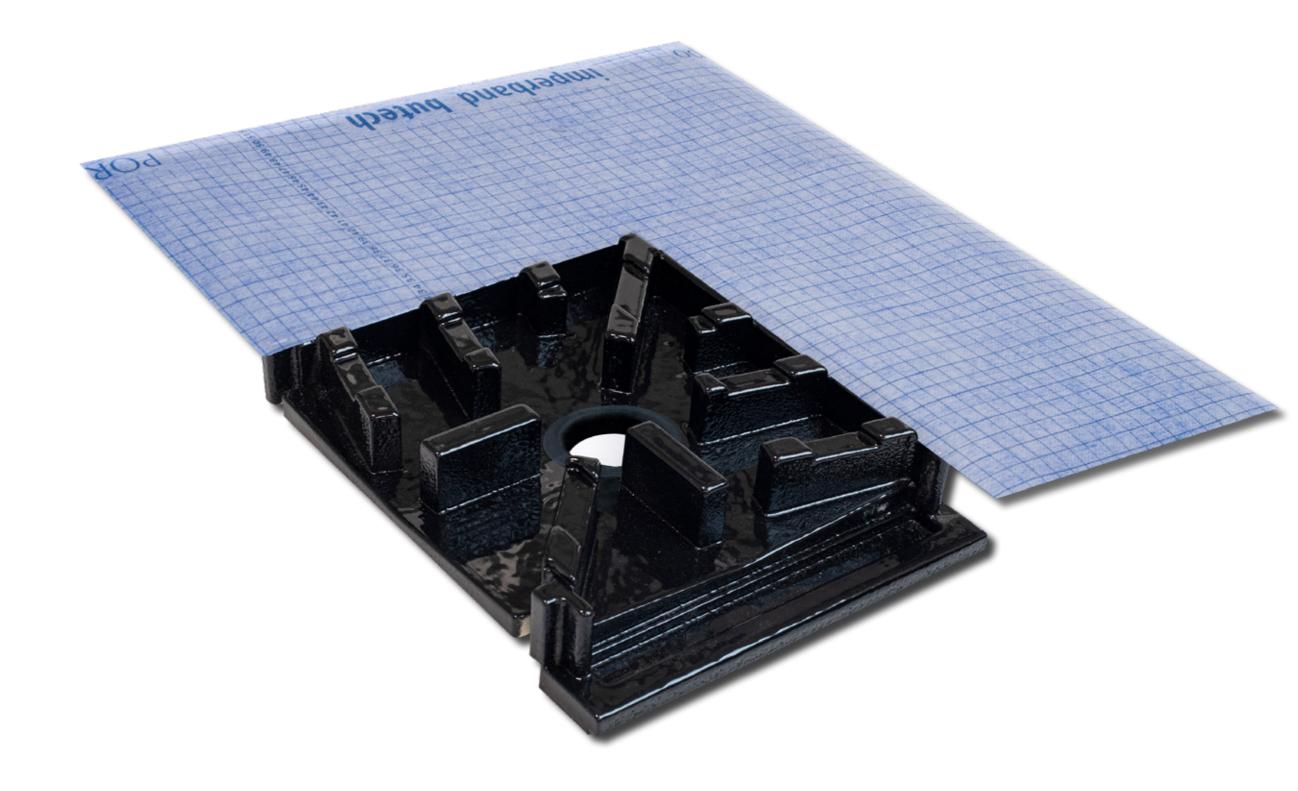

pool-deck corner drain int

Corner drain piece with internal V slope.

Includes: heat-sealed **imperband** waterproofing sheet on the eaves of the channel and special drain that supports high pressures and withstand products commonly used in swimming pools.

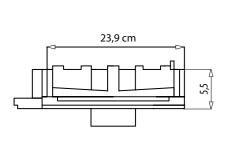

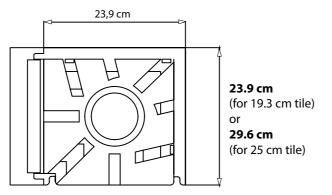

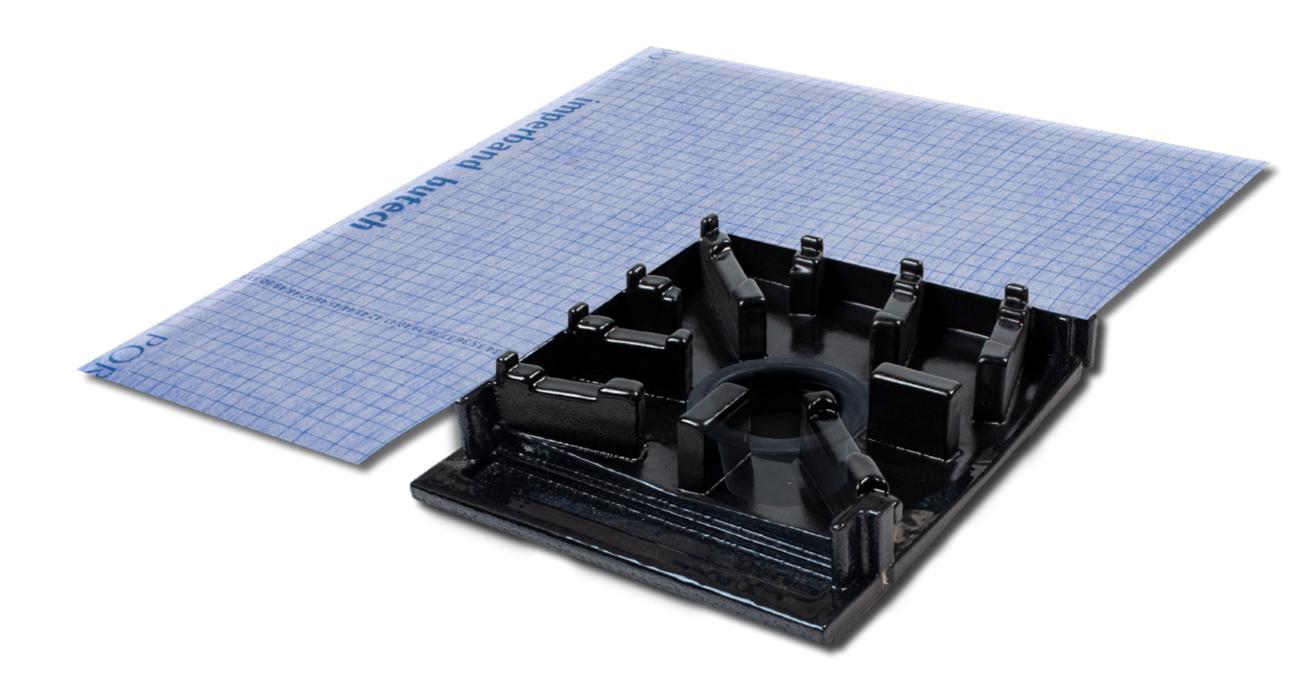

pool-deck corner drain ext

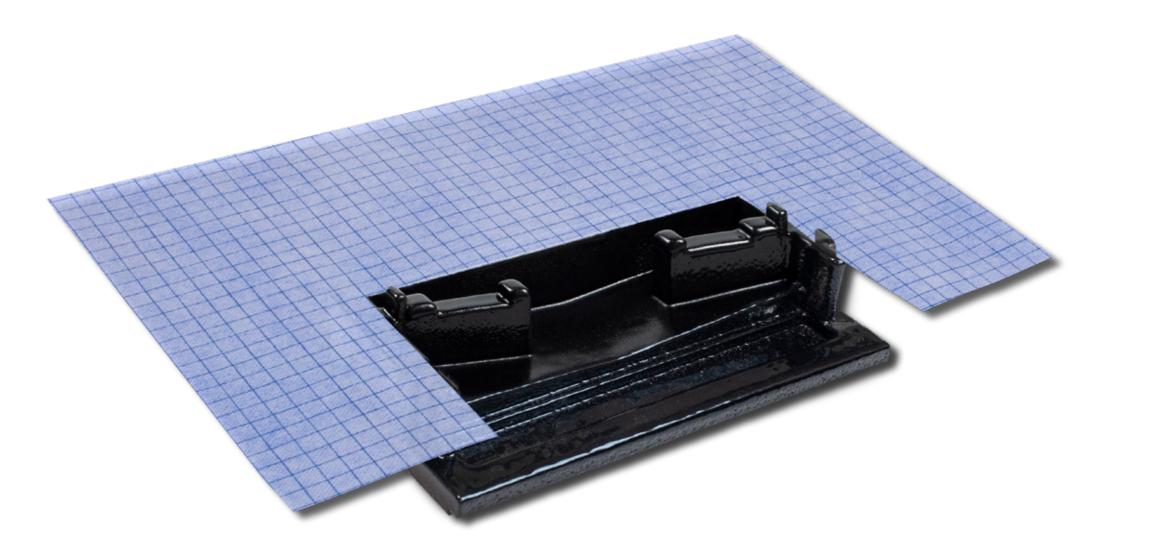

Corner drain piece with internal V slope.

Includes: heat-sealed **imperband** waterproofing sheet on the eaves of the channel and special drain that supports high pressures and withstand products commonly used in swimming pools.

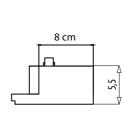

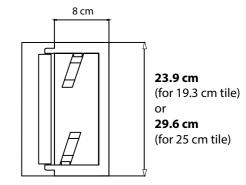

pool-deck side male

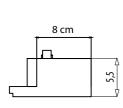

Channel start / end piece.

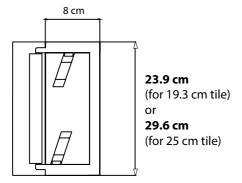

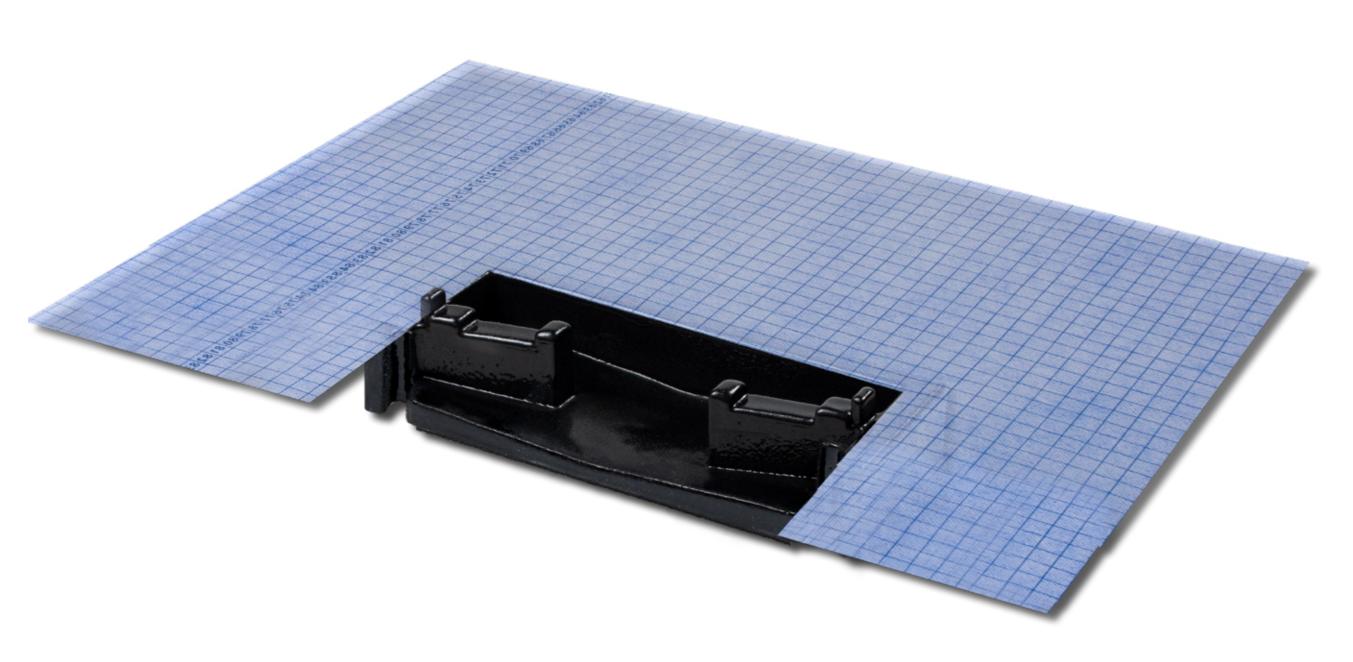

pool-deck side female

Channel start / end piece.

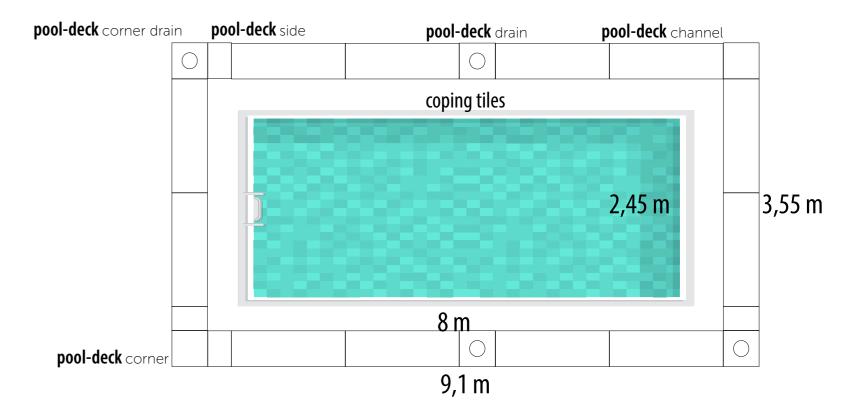

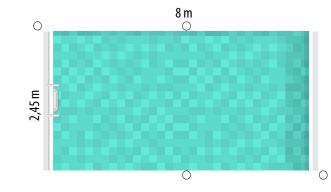

Layout schemedss

Layout scheme for a 2.45m x 8m pool

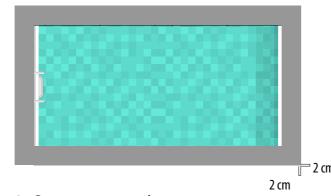

Assembly instructions

1 - Layout and calculation of components:

Provide butech with a dimensioned plan of the pool showing the position of the drain and the tile size that surrounds the pool.

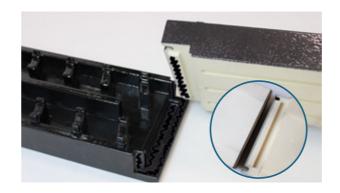

2 - Support preparations:

Make a recess in the support along the entire channel of 8 cm deep and 26 cm or 31.5 cm depending on the width of the **pool-deck channel.** Check that the slopes of the terrace are well made towards the **pool-deck** system

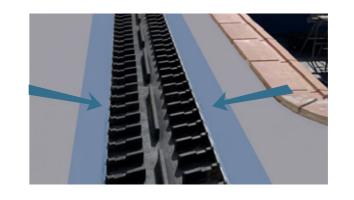

3 - Connection of the drainage system:

Connect the drain supplied to the drain pipe, place the piece of **pool-deck drain** or **pool-deck corner drain** on adhesive C2 S2 and stick with Butech **p-404**, both around of the joint between drain and **pool-deck piece** as in the drain itself.

4 - Assembling the channel components:

Connect the different channel pieces (tongue and groove) and a continuous thread of Butech **p-404**. Before laying, it is recommended to connect a maximum of 4 pieces.

5 - Channel placement:

Apply a layer of C2 S2 adhesive on the support, and place the previously connected system parts. Fill the gaps between the channel and the rest of the flooring base and check that the channel is flush with the surface of the terrace..

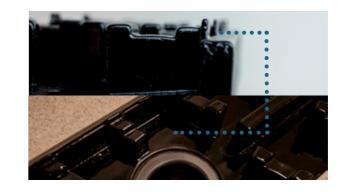

6 - Waterproofing the pool-deck channel:

Unfold the **imperband** eaves and glue them to the support with a C2 S2 adhesive. Overlap the adjoining eaves of **pool-deck** pieces to get the entire length of the channel waterproofed on both sides.

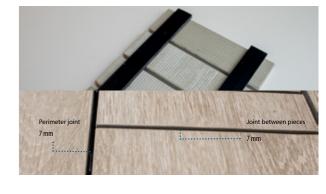

7 - Waterproofing the support:

Proceed to waterproof the terrace and overlap a minimum of 10 cm on the **imperband** eaves of **pool-deck.**

8 - Laying the floor tiles:

Install the floor tiles using the thin-layer and backbutter method, in such a way that the perimeter tiles of the channel extend over the **pool-deck** pieces up to the protruding stops on the sides of each piece.

9 - Channel covering:

Cut the tile pieces according to the channel design and stick with Butech **p-404** to the PVC supports. These PVC supports have to fit perfectly in the two grooves of each piece of **pool-deck**. Always leave a 7 mm joint between each tile piece.

Item codes

PAR-KER 19,3 x 120 cm - 19,3 x 180 cm

SAP	Description	Dimensions (cm)*
100284673	POOL-DECK CHANNEL	19,3 x 95
